KUMON KIDS ARE MORE THAN LUCKY!

Legend has it that many, many years ago on March 17, St. Patrick chased hundred of dangerous snakes completely out of Ireland. Today, we celebrate this day by wearing green, and greeting one another with such Irish salutations as “Top of the morning to you!” This is a fun holiday both for children and adults. Irish immigrants, who have settled all over the world, especially in North America and many large cities, have annual St. Patrick’s Day Parades to celebrate this holiday.

When people refer to “the luck of the Irish,” they are referring to someone or something that is very lucky. But luck has nothing to do with success in Kumon. The benefits children receive through Kumon study do not happen by chance. Although new students may be “green” at first when it comes to completing daily mathematics assignments, it helps them to eventually develop fantastic study habits. Diligence, commitment, consistency in attendance and completion of assignments are what bring about success for all students. Hard work pays off in Kumon; couch potatoes do not make progress (even if they are Irish!). Kumon study provides a daily opportunity for achievement. Students make smoother, more sustained progress when they are consistent with Kumon and their assignments are completed every day. Parental encouragement is also very important for a student’s motivation. Students meet with success and good fortune not because of “the luck of the Irish,” but because of their tremendous efforts.

If they remain active in Kumon long-term, students will discover their own “pot of gold at the end of the rainbow.” That pot of gold is their unlimited potential. The Kumon Method will enable students not only to discover their capabilities, but also to help develop them to the fullest extent possible.

HAPPY ST. PATRICK’S DAY FROM KUMON!

Michelle Bettuzzi, Instructor
